## Using This Reference

To use MediaCentral Shared Library's features for archiving and restoring, you must configure Production Management Archive and Restore profiles in the MediaCentral Cloud UX Workflow Settings app. If you select the option “First Matching Resolution” or “All Matching Resolutions” in the profile configuration, you need to specify the Video Resolution(s) to be used.

Starting with version 2019.6, you can use the “Video Resolutions” picktool that lets you easily define video resolutions labels and directly assign them to the current profile. Any video resolution label created in the picktool is available for selection in all other profiles.

The “Video Resolutions” field still supports manual input. To do so, enter the value shown in the Production Label column of the Supported Video Resolution Reference tables listed in the following sections.

For more information, see the chapter “Creating Production Management Profiles” in the *MediaCentral | Shared Library Installation and Configuration Guide*.
